

## Protegrity Discover

Duration: 4 hours (half-day)

Audience: Database administrators, system administrators, and security and governance officers

Recommended Prerequisite: Protegrity's Data Protection Fundamentals course

Certificate of Completion: Yes

### Description:

Discover and define sensitive data with Protegrity Discover. Protegrity Discover is a database-agnostic, sensitive discovery tool, designed so your organization can turn information into functional, decision-affecting resources and reduce the disruption and financial impact of multiple or third-party enterprise audits.

This in-depth training includes discovering and classifying sensitive data, which will include demos, knowledge checks, and hands-on labs.

### Agenda:

- Overview of Protegrity Discover and its benefits
- Discover features and capabilities
  - Dashboard overview, classifications, data sources
  - Discover rules (Tasks and Classifiers)
  - Manage Discover logs
  - Appliance (License, Kerberos, ODBC, Datastore)
- Install Protegrity Discover
- Create and test Protegrity Discover scans
